Care and cleaning instructions:

MARLAN products are temperature resistant for a short time until 180°C. However, hot items (like e.g. pots, pans) should be put on a heat resistant base because the temperature is difficult to estimate. Focal spots can be polished away with a cleaning sponge or sandpaper.

MARLAN products are resistant against persistent non-staining products as well as a large number of chemicals. Spots should not be allowed to get dry on material.

1. Regular cleaning

For the regular cleaning use warm water and a soft soap water. Sandy cleaner do not harm the product but most of the dirt can be removed by lemon juice. For tenacious stains we recommend the biologic neutral MARLAN-Supercleaner.

2. Cleansing of calcium

Hard water causes chalk deposits within the MARLAN vanity unit and can subsequently adduct dirt. Because of that chalk should be removed regularly with vinegar or with the MARLAN-Supercleaner.

3. Handling of scratches

Soft scratches can be polished but, in this case as well: avoid is better than repair. Treat sharp items with caution and do not use the product as chopped wood or cutting board.

4. Repairs

Nevertheless, should an little accident happen and the product is damaged please contact us. We have repairing means available, which are able to remove damages as good as they are invisible.
