

KEMMLIT | Active Sports V-Lockers

Forget all the problems with damp cycling or running clothing at work that gets hung up all over the place, doesn't dry and starts to smell.

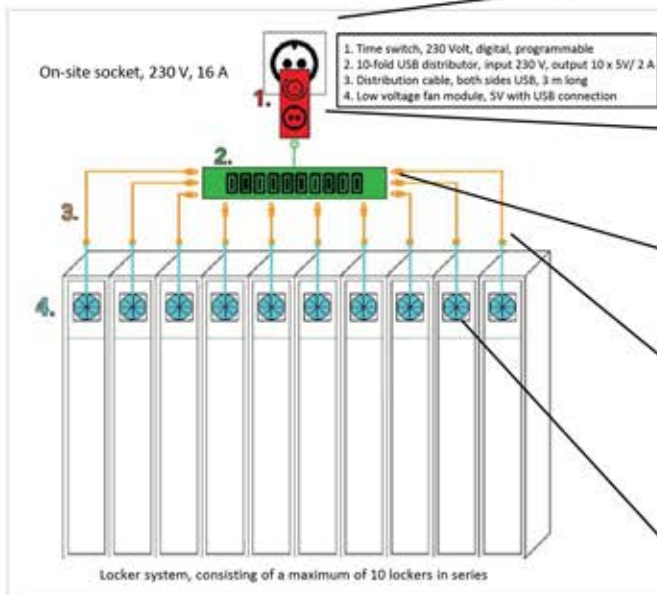

Instead, opt for one of our Ventilated Locker Systems purposely designed for sports clothing which allows fresh air to flow into the locker for pleasant dry clothes for the next use.

The air is sucked through the ventilation holes into the fan housing where it is blown into the surrounding room. A controller above the fan housing determines how much air goes to the exhaust air system and how much is to be circulated. Ventilation with circulating air is the fastest way to get wet clothes in lockers dry.

Electronic USB Fan Connection Kit

The on-site socket should be placed at a height of approx. 2300mm.
10 lockers can always be connected to one socket.

The running time of the fans can be controlled with an optional timer

The USB distributor is plugged into the existing 230V socket. It is always possible to operate 10 fans via one socket and one distributor

The fans are connected to the distributor via a USB cable.
Cable length 3 m
